The Address column was removed due to a high number of missing values, and duplicate records were eliminated to improve data quality. Data types were corrected for all columns, and text fields were standardized using Trim and Capitalize Each Word transformations. The Position column was split into Latitude and Longitude, while the Last Update column was separated into Date and Time fields. Finally, the cleaned table was renamed to **Fact_Bike_Station**.

Data Modeling:

Clculated Columns:

Bike Availability Status

Table with 15 columns: Latitude, Longitude, Banking, Bonus, Status, Contract Name(City), Bike Stands, Available Bike Stands, Available Bikes, Date, Time, Bike Availability Status. The table contains 40 rows of data, showing various bike stations and their availability status.

Empty slots

Table with 15 columns: Longitude, Banking, Bonus, Status, Contract Name(City), Bike Stands, Available Bike Stands, Available Bikes, Date, Time, Bike Availability Status, Empty Slots. The table contains 40 rows of data, showing various bike stations and their availability status, with an additional 'Empty Slots' column.
